

Create Superior, Accurate Flat Patterns for Sewn Products Using Logopress3

Case Study

September, 2010

PRO-TECH Design and Manufacturing is a full service ISO Registered contract manufacturer and packager; primarily serving the medical industry. PRO-TECH has been providing unequalled quality, reliability and customer service for over 27 years.

"We use Logopress3 BLANK for the off label purpose of creating flat patterns for sewn products. Before we purchased Logopress3 we did not have any way to take a Solidworks part model and directly produce patterns from it. Previously the task of creating patterns required

a lot of guesswork and we almost always had to make multiple prototypes before we could get a final product. Now, the guesswork has been eliminated. We go from a Solidworks model to a physical prototype in a single design cycle and almost never need to make more than one prototype. If we need to make adjustments in Solidworks I simply regenerate the patterns with Logopress3 BLANK, no guesswork involved.

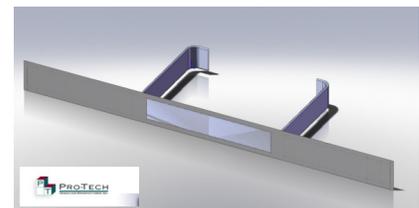

Before purchasing Logopress3 BLANK we evaluated many of the competing products and found that Logopress3 BLANK creates superior patterns and is much easier to use than many of the competing products. Logopress3 BLANK is also much more cost effective than many of its competitors."
